The wiring of Green Bonus was -15 seconds per item identified. The cumulative time was taken off of the finishing time for the runners. For those running alternate distances your time per km/h was extrapolated to the 8km event distance. For walkers, I calculated your pace/distance for 1 hour, then adjusted for the Wearing of the Green Bonus. Your final 1 hour pace was calculated with this time adjustment.

Once again, if I have forgotten anyone, or made any errors please let me know. The results can be amended at any time. **PSL**
